Dear Parents,

Христос се роди! Христос родиося! Christ is born!

It is with great pleasure to announce that Family Science Night will take place on Wednesday, February 8, 2012 beginning at 6:30 p.m. in the Auditorium. The purpose of Family Science Night is to promote the importance of science in children's lives and for the display and presentation of 2nd through 6th grade science fair projects. For the 2nd through 6th grade students, I kindly ask for all parents to be involved in their child's science fair project by assisting them in any way possible. **Please keep in mind that most of your child's project work is to be completed at home.** Your child's teacher is to serve as a guide in the various science fair project phases. If you have any questions about the science fair projects please see your child's teacher.

Even though preschool, kindergarten and 1st grade students are not participating in the science fair portion of this Family Science Night, we highly encourage even these students to attend. We will also have a special guest scientist from Mad Science Chicago who will be showing the children some interesting scientific experiments. Likewise, there will be a special portion of the presentation devoted to the works of our very own well-known Serbian scientist and genius Nikola Tesla.

This is a wonderful opportunity to expose the youngest of children to various areas of science in an effort to create an interest for science and to stress the importance of this field of study. Therefore, I urge all students and parents of St. Sava Academy to attend Family Science Night.

I look forward to seeing all of you on Wednesday, February 8, 2012 at Family Science Night.

Yours in the new born Christ-child,

Marko Bojović
